Assignment:

Slide81: Exercise

Suppose a group of 12 sales price records has been sorted as follows:

5, 10, 11, 13, 15, 35, 50, 55, 72, 92, 204, 215.

Partition them into three bins by each of the following methods.

(a) equal-frequency (equal-depth) partitioning

bin1 : 5、10、11、13

bin2 : 15、35、50、55

bin3 : 72、92、204、215

(b) equal-width partitioning

$$\text{width} = (215 - 5) / 3 = 70$$

bin1 : 5、10、11、13、15、35、50、55、72

bin2 : 92

bin3 : 204、215

(c) min-max normalization by setting min=0 and max=1

$$X_{\text{norm}} = (X-5)/(215-5) * (1-0)+0 = (X-5)/(215-5)$$

So that:

- 5 -> 0
- 10 -> 0.0238
- 11 -> 0.0286
- 13 -> 0.0381
- 15 -> 0.0476
- 35 -> 0.1429
- 50 -> 0.2143
- 55 -> 0.2381
- 72 -> 0.3190

- 92 -> 0.4143

- 204 -> 0.9476
- 215 -> 1

So the 3bins is:

bin1 : 5、10、11、13、15、35、50、55、72

bin2 : 92

bin3 : 204、215
